Update from GRZ

We welcome you to our newsletter, which will be issued regularly from now on. Our objective is to share insights on our exciting hydrogen ecosystem with you.

The most important news in the past months is certainly the transfer of our company to a new site. The new facility is located in Avenches, just 10 minutes from our previous site. With around 1000 square meters of space available, we are able to increase our production capacity. This also supports our transition towards the commercialization of standardized products. By doing so, processes are optimized, resulting in increased efficiency and eventually lower prices for our customers.

In addition to increasing the production capacity, we are also expanding our capabilities in engineering, R&D and business development in order to further develop our product portfolio. This will take us one step closer to our objective – helping to replace fossil-based energy systems with sustainable, innovative hydrogen solutions.

The DASH hydrogen storage system delivered by GRZ to STE Energy has been successfully commissioned within the “Noi Tech Park” in Brunico, Italy. It is the first industrial-scale application of the metal hydrides hydrogen storage technology in the Italian market.

We are welcoming Henrik Steen Pedersen as our Chief Commercial Officer (CCO). Joining the team, Henrik will further drive the scaling of our hydrogen business.

Henrik is a highly qualified CCO with a track record of over 30 years in the technical sector, both in listed and equity-financed corporations. Henrik has been focusing on renewable energy solutions in the last decade, using hydrogen as an energy carrier in international projects. He has successfully developed and implemented the commercial strategy of various companies he has been working at and is keen to develop GRZ's business on a global scale in the coming years.

"I am excited to join GRZ and support the company's further expansion. I believe in its core values, vision, and immense potential. It is a unique opportunity to be part of a fast-growing company positioned in one of the most innovative industries of this decade", said Henrik Steen Pedersen.

"With Henrik Steen Pedersen, we welcome a very experienced commercial executive to our team", said Noris Gallandat, CEO of GRZ. "As we continue growing at a fast pace, Henrik will decisively support us with his deep commercial expertise as we aim to scale strongly."

"We are very happy with our new premises which allow us expanding the team and improving the production capacity and efficiency. This is a major step towards our vision to take part in building a world powered by renewable energy, day and night, summer and winter", continues Noris Gallandat

"We have been in discussions with this company for one and a half years. We have been convinced by the added value of this innovative company and the very interesting potential for new jobs", mentioned Mr. Gaetan Aeby, Mayor of the Municipality of Avenches, in the daily newspaper La Liberté (29.04.2023).

The global hydrogen market is growing exponentially – and so are we. Our team is expanding rapidly. Take a look at our current open positions and join our team to make an impact on the planet!
